

Polytec EMC metering units for processing hot elastomers

CTM is an agent for Polytec EMC

Our Polytec range is modular and designed to process polyurethane, adhesive, epoxy, silicone, and hot elastomer systems at temperatures of up to 130 degrees centigrade.

We offer a dedicated range of machines that can be supplied with static, roto static or dynamic mixing heads depending upon the final application and customer preference.

2 component bench mounted metering units Type DG 10

This metering unit is a simple bench top entry level model for the production of small and simple components.

The key benefit here is low investment cost coupled with processing simplicity.

Two & three component metering units Type DG 103

Our twin drive DG 103 range featured here offers the end user a greater level of flexibility and performance.

The DG 103 range features heated component tanks with a full vacuum rating which ensures that the base materials are always fully conditioned and ready to use.

This range of metering unit is fully mobile with the mixing head being supported on a short boom and spring assisted mixing head support system.

Multi Component metering units

Type DG 200

Our flagship is the DG 200 series and is designed to meet the most demanding of end user applications.

The DG 200 range features up to a four component preparation and mixing system that is capable of processing the most demanding of hot elastomer systems.

Multi Component casting heads

CTM offer 2, 3, and 4 component hot casting elastomer processing systems as standard

The mixing head featured here is capable of mixing up to 4 elastomer components with the possibility of direct colour injection.

Roller Coating

We can supply a range of modular roller coating systems from our standard product range.
